

Conditional Statements

Introduction to Programming

StayAhead Training; Sep, 2024

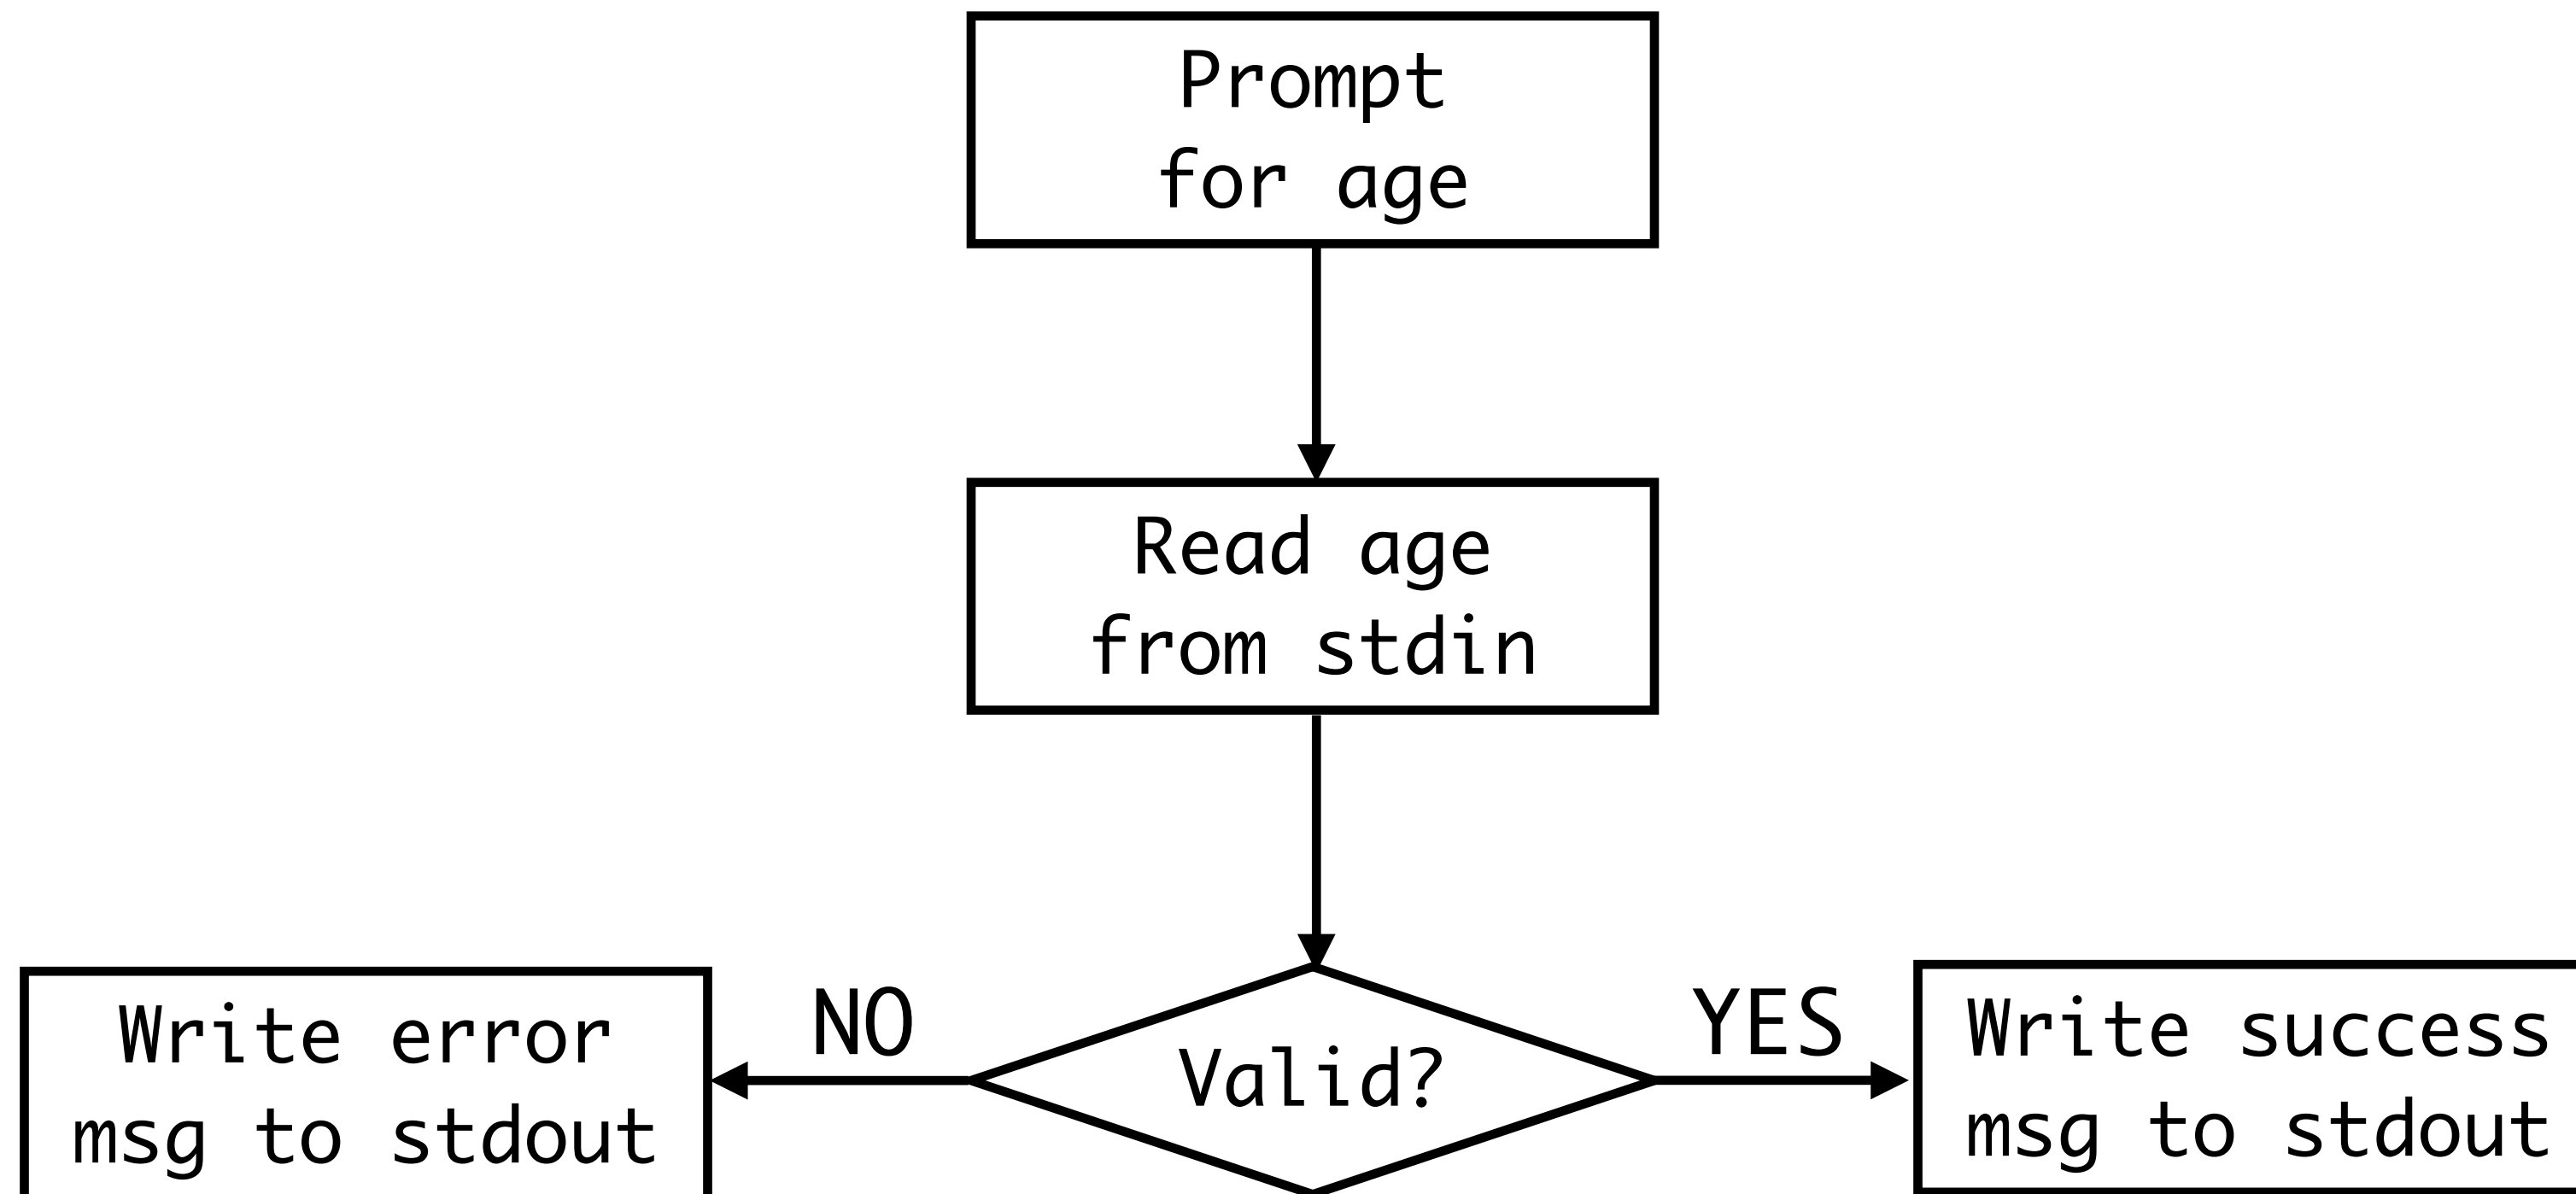

Introduction

Conditional Statements

- **Conditional statement:**
 - A statement comprised of n blocks
 - At most one of n blocks will be executed

Introduction

Conditional Statements

If Else

Conditional Statements

- Pseudocode, e.g.:
 - IF Temp > 20 THEN
 - OUTPUT "It's warm" to stdout
 - ELSE
 - OUTPUT "It's cool" to stdout
 - ENDIF

If Else

Conditional Statements

- `if day_of_week == 6 or day_of_week == 7:`
- `print("It's the weekend!")`
- `else:`
- `print("It's a weekday")`

Code Blocks

Conditional Statements

- `if day_of_week == 6 or day_of_week == 7:`
- `# true path code block`
- `print("It's the weekend!")`
- `else:`
- `# false path code block`
- `print("It's a weekday")`

One Path

Conditional Statements

- `if day_of_week == 5:`
- `print("It's nearly the weekend!")`

Three or More Paths

Conditional Statements

- `if` `day_of_week == 5:`
- `print("It's nearly the weekend!")`
- `elif` `day_of_week == 6 or day_of_week == 7:`
- `print("It's the weekend!")`
- `else:`
- `print("It's a weekday")`

Nesting

Conditional Statements

- `if age < 18:`
- `print("You are a minor")`
- `else:`
- `if age < 65:`
- `print("You are of working age")`
- `else:`
- `print("You are eligible for retirement")`
